                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 6, A

The present sequence represents a human Akt3 protein. Expression of Akt3 prevents apoptotic cell death induced by apoptotic stimulating kinase 1 (ASK1). The Akt3 polypoptide is useful for inhibiting cell death, preferably in a cardiac mycotye, resulting from hypoxia, apoptosis or necrosis in a patient suffering from mycoardial infarction or ischemia reperfusion injury. The polypeptide is also useful for treating mycoardial infarction or ischemia reperfusion injury. The more appropriated is also useful for treating reperfusion injury is mycoardial ischemia reperfusion injury or is associated with stroke, liver damage, renal failure, organ

Claim 16; Page 64-65; 73pp; English.

## ALIGNMENTS

Novel AKT3 nucleic acid and proteins capable of preventing apoptotic cell death induced by apoptosis stimulating kinase 1 useful for treating myocardial infarction or ischemia reperfusion injury. Human; Akt3; apoptotic cell death; apoptotic stimulating kinase 1; ASK1; hypoxia; apoptosis; necrosis; myocardial infarction; ischemia; reperfusion injury; myocardial ischemia reperfusion injury; stroke; liver damage; renal failure; organ transplantation; coronary artery. Amino acid sequence of a human Akt3 polypeptide. Clark KL, Ivashchenko YD; AAB19011 standard; protein; 465 AA. (AVET ) AVENTIS PHARM PROD INC. 14-MAR-2000; 2000WO-US006574. 99US-0125108P. (first entry) WPI; 2000-638260/61. Pagnoni MF, N-PSDB; AAA96637 WO200056866-A2. Homo sapiens. 19-MAR-1999; 08-FEB-2001 28-SEP-2000. AAB19011; Guo K, RESULT 1

with a nucleic acid containing a nucleotide sequence (AAH79025) of 1570 base pairs defined in the specification. Akt3 has carebroprotective, notropic, neuroprotective, antiarthritic, osteopathic, vasotropic and hepatotropic activity, as an inhibitor of apoptosis and/or apoptosis and the specification. Akt3 has carebroprotective, negatotropic activity, as an inhibitor of apoptosis and/or apoptosis of trimulating kinase 1 (ASK1)-induced cell death Akt3 operably linked to a regulatory region is useful for inhibiting cell death in cardiac myocytes resulting from hypoxia, apoptosis or necrosis and for treating myocardial infarction or ischaemia reperfusion injury, particularly that associated with stroke, liver damage, renal failure, organ transplantation or coronary artery bypass grafting. Agonist of Akt3 are useful for improving Akt3 activity during treatment of patients suffering from myocardial infarction or ischeemia reperfusion injury and inhibitors of Akt3 activity dering treatment of patients suffering from myocardial infarction function, improved quality of life and reduced mortality. In patients with existing heart failure, gene therapy with Akt3 retards the concept the activity described in dilation and slows down disease progression.

Section of function inproved quality of life and reduced mortality. In parcess of ventricular dilation and slows down disease progression or death by apoptosis, including Alzheimer's disease tates, involving cell death by apoptosis, including Alzheimer's disease, liver degeneration or

a serine/threonine protein kinase capable of inducing vascular and serine/threonine protein kinase capable of inducing vascular and serine/threonine protein kinase capable of inducing vascular and capable of the sequence was deduced from cDNA (see AAA89264) isolated from a heart cDNA library. Akt3 is shorter than Akt1 (see AAB19997) and Akt2 (see AAB19998) and there is no significant homology between Akt3 and Akt1 or Akt2 at the C-terminus of the molecules. A claimed method of inducing expression of VeGF in a cell involves administering Akt1, Akt2 or Akt3, or a nucleic acid encoding involves administering Akt1, Akt2 or Akt3, or a nucleic acid encoding or myocardial ischaemia, or ischaemic, idopathic or hypertrophic or myocardial ischaemia, or ischaemic, idopathic or hypertrophic cardiomyopathy. The result is beneficial collateral blood vessel formation. A claimed method of inhibiting angiogenesis in a patient suffering from a tumour, comprises inhibiting the level of Akt activity comprises introducing an Akt antisense nucleic acid, an intracellular comprises introducing a makt antisense nucleic acid, an intracellular chinding protein (e.g. a scPv) that sepecifically binds the Akt protein, or a nucleic acid encoding a dominant negative form of an Akt
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

The present sequence is that of human Akt2, a serine/threonine protein kinase capable of inducing vasular endothelial growth factor (VEGF) expression. A claimed method of inducing expression of VEGF in a cell involves administering Akt2, Akt1 (see AAB19997) or Akt3 (see AAB1996), or a nucleic acid encoding such a protein. The cell is preferably from a patient suffering from an ischaemic condition, especially from a cerebrovascular, renal, pulmonary, limb or myocardial ischaemia, or beneficial collateral blood vessel formation. A claimed method of inhibiting angiogenesis in a patient suffering from a tumour, comprises inhibiting the level of Akt activity in the patient, thereby inhibiting production of VEGF. The method comprises introducing an Akt antisense nucleic acid, an intracellular binding protein (e.g. a scFv) that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 121 HSGKIVYRDLKLENLMLDKDGHIKITDFGLCKEGITDAATMKTFCGTPEYLAPEVLEDND 180

The invention relates to a mutant Chrysosporium strain comprising a nucleic acid sequence encoding a polypeptide of interest. A mutant Chrysosporium strain is useful for producing a polypeptide of interest by culturing a mutant Chrysosporium strain under conditions permitting expression of the protein or polypeptide, and recovering the subsequently produced polypeptide of interest. The conditions further permit secretion of the protein or polypeptide of interest. The polypeptides are useful for hydrolysing beta-glucosidic bonds. A polypeptide is useful for hydrolysing beta-xylosidic bonds. The present sequence represents a human Chrysosporium associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              143 KTMNDFDYLKLLGKGTFGKVILVREKASGKYYAMKILKKEVIIAKDEVAHTLTESRVLKN 202

A mutant Chrysosporium strain is useful for producing a polypeptide of interest by culturing a mutant Chrysosporium strain under conditions permitting expression of the protein or polypeptide, and recovering the subsequently produced polypeptide of interest. The conditions further permit secretion of the protein or polypeptide of interest. The polypeptides are useful for hydrolysing beta-glucosidic bonds. A polypeptide is useful for hydrolysing beta-xylosidic bonds. The present sequence represents a human

The present sequence represents a human protein kinase B gamma (PKB) polypeptide. PKB is activated by insulin or insulin growth factor 1. Lipid products of phosphoinostiide 3-kinase act in insulin signalling by binding to pleckstrin homology domains of PKB. PKB polynucleotides may be used as a source of probes and primers. PKB polypeptides are used to raise antibodies, which are used in diagnostic assays. The polypeptides are also useful for screening for compounds which affect insulin
                                                                                    322

Sequence 479 AA;

```
The present sequence is human Akt-3. Akt-3 is a third human isoform of Akt, which is also known as protein kinase B (PKB) or "related to A and C protein kinase" (RAC-PK). It is located on human chromosome 1, region q43-q44. A human hippocampal EST sequence that showed high similarity to the rat RAC-PKgamma sequence was used to design primers for 3' rapid amplification of cDNA ends (3' RACE). The sequence obtained in the first round of 3' RACE was used to design primers for a second round. The complete sequence was then amplified from human hippocampal cDNA by PCR using primers based on the product of the second round of 3' RACE. Akt can inhibit apoptosis induced by detachment from the extracellular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to identifying an agent modulating interaction between integrin-linked kinase (ILK) and presenting. (FB1) comprisaing providing ILK, PS1 or their functional variants, as first and second components respectively, contacting the components in the presence of a
matrix. The Akt-3 nucleic acid molecule and protein may be used as medicaments for treating cancer. Agents which influence the activity of Akt-3 protein, and so stimulate apoptosis, may also be used to treat
                                                                                                                                                                                                   TRHPFLTSLKYSFQTKDRLCFVMEYVNGGELFFHLSRERVFSEDRTRFYGAEIVSALDYL

                                                                   the method above where the components are protein kinase beta (FKB), and an enthod above where the components are protein kinase beta (FKB), the methods and an agent identified by the methods. The methods are used for identifying an agent that medulates interaction between ILK and FB1. Or FKB or gamma-secretase. The agent has therapeutic applications in treating humans or animals, for treating a host suffering from a condition associated with an interaction between ILK and FB1, activity of gamma-secretase, apoptosis, cancer and Alzheimer's disease. The agent is also useful for manufacturing a medicament for use in treatment of the above mentioned conditions. The present sequence represents human protein kinase B gamma

The present invention describes the regulation of apoptosis, in which the intracellular binding of Akt (a serine/threonine kinase) with Hsp90 (a char-shock protein) is promoted or inhibited. The present invention also describes: (1) isoforms of Akt and Hsp90, and their partial peptides including the binding domain; (2) antibodies to Akt or Hsp90, (3) DNA concluding the binding domain; (4) expression vectors containing the DNA; (5) host cells commain; (4) expression vectors containing the DNA; (5) host cells containing the DNA; (6) production of Akt or Hsp90 or their partial peptides including the binding domain by culture of the cransformed cells; (7) screening compounds for their ability to modify intracellular Akt activity by contact with cells expressing Akt or Hsp90; and (8) drug compositions containing antibodies recognizing the binding domain of Akt or Hsp90 and optionally also an anticancer agent. Akt and Hsp90 have cytostatic, cardiant, vasotropic, hepatotropic, antidiabetic, neuroprotective and nootropic activities. Blockade of the binding of Hsp90 with Akt increases the sensitivity of cells to apoptosis induction. Akt and Hsp90 can be used in the prevention and treatment of diseases with which apoptosis regulation is associated, including cancer (such as gastric cancer, ovarian cancer, breast cancer, pancreatic cancer, ovarian cancer, breast cancer, paresent sequence represents human Akts which is used in the prevention and treatment is schaemia. The prevent is sequenced by the containing the binding concer and concerned to be applied to the prevention and treatment cancer and concerned to be appresent sequence represents human Akts which is used in the
                                                                                         Regulation of apoptosis by promoting or inhibiting the intracellular binding of Akt with Hsp90, useful for prevention and treatment of apoptosis-regulation associated diseases including cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 exemplification of the present invention

The present invention describes a crystal of protein kinase B beta (PKBbeta) comprising (1), where (1) comprises: (a) a tetragonal space group P4-12-12 and unit cell dimensions of: a = 149.33 plus or minus of shagstrom, b = 149.33 plus or minus 0.5 Angstrom, c = 39.77 plus or minus 0.5 Angstrom, a = 148.40 plus or minus 0.5 Angstrom, b = 148.40 plus or minus 0.5 Angstrom, a = 149.70 plus or minus 0.5 Angstrom, c = 39.19 plus or minus 0.5 Angstrom, c = 39.90 plus or minus 0.5 Angstrom, c = 39.06 plus or minus 0.5 Angstrom, c = 39.90 plus or minus 0.5 Angstrom, c = 39.90 plus or minus 0.5 Angstrom, c = 39.06 plus or protein kinases. The crystal may also be used in minus 0.5 Angstrom a medicament for treating cancers, diabetes, erectile consultation or neurodegeneration. The present sequence represents the human PKB-gamma amino acid sequence, which is given in the exertile consultation of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New crystal of protein kinase B beta, useful for activating protein kinases, e.g. AGC kinases, comprises three-dimensional atomic coordinates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           202
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        262

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method for identifying a ligand (L), which binds to an inactive conformation of target protein kinase (T). The method involves contacting inactive conformation of (T), which contains or is modified to contain a reactive group at or near a binding site of interest, with one or more ligand candidates capable of covalently bonding to the reactive group thus forming a kinase-(L) conjugate (C). The method is useful for identifying protein kinase inhibitors that preferentially bind to inactive conformation of a target protein kinase. The present sequence is a protein kinase which may be modified via an amino acid substitution, for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TRHPFLTSLKYSFQTKDRLCFVMBYVNGGELFFHLSRERVFSEDRTRFYGAEIVSALDYL 120

The present invention describes a composition (CI) which comprises a kinase pathway inhibitor (a) and an anti-prostate cancer compound (b). Also described: (1) identification of a mitogen-activated protein (MAP) kinase pathway inhibitor involving incubating an artivable MAP kinase pathway and selecting the molecules which inhibit the activation of the MAP kinase pathway, and (2) identification of a prostate cancer inhibitor involving incubating a cell with hydroxyflutamide and potential involving incubating a cell with hydroxyflutamide and potential inhibitor, and assaying the level of activation of MAP kinase pathway or phosphatidylinositol 3-kinase (PISK)/Akt kinase pathway. Cl has cytostatic activity, and can be used as MAP kinase inhibitor, phosphatidylinositol 3-kinase (PISK)/Akt kinase inhibitor, and androgen receptor (AR) inhibitor. Cl can be used as the presentment of prostate cancer; for identifying a mapper in the treatment of prostate cancer cancer inhibitor; and for reducing the number of prostate cancer cells in a sample. The composition Cl provides effective combination therapy as compared to prior therapies. The present sequence represents human serine/threonine kinase Akt-3, which is used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

cardiovascular or thrombotic disorder. Specifically, it refers to the identification of nucleic acid molecules, and the encoded proteins identification of nucleic acid molecules, and the encoded proteins thereof, which are differentially expressed in cardiovascular disease states relative to their normal expression in non-diseased tissue. The present invention describes test compounds (i.e. small molecules, peptides or antibodies) that can bind to and modulate the activity of these differentially expressed membrane-bound polypeptides, where binding is detected by a competition binding assay, immunoassay or yeast two-hybrid assay. Accordingly, pharmaceutical compositions can be developed the detected by a competition binding assay, immunoassay or yeast two-hybrid assay. Accordingly, pharmaceutical compositions can be developed at disease the developed composition in the developed at the conscious the developed composition and used via gene therapy to treat aberrant vascularisation, dyslipidaemia, high blood pressure or heart failure. As such, they achieve and cardiant activities. This polypeptide sequence is a human protein that is differentially expressed in a patient with a cardiovascular disorder, given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             322

New nucleic acid encoding human Akt3 protein, useful for inhibiting cell death and treating myocardial infarction, ischemia reperfusion injury associated with stroke, liver damage and renal failure.

Disclosure; Page 72-73; 73pp; English.

The invention relates to human Akt3 protein (AH/PH-domain containing serine/threonine kinase, Akt) comprising a fully defined sequence (AAG78018) of 465 amino acids, its splice variant or allelic variant.

CK (AAG78018) of 465 amino acids, its splice variant or allelic variant.

Where the encoding polynucleotide hybridises under stringent conditions with a nucleic acid containing a nucleotide sequence (AAH79025) of 1570 base pairs defined in the specification. Akt3 has cerebroprotective, noctropic, neuroprotective, antiarthritic, osteopathic, vasotropic and hepatcotropic activity, as an inhibitor of apoptosis and/or apoptosis of the setulitory region is useful for inhibition cell death. Akt3 operably linked to a regulatory region is useful for inhibition of the treating myocardial infarction or ischaemia reperfusion injury, particularly that associated infarction or ischaemia reperfusion injury, particularly that associated of the factory artery bypass grafting. Agonist of Akt3 are useful for improving theory activity during treatment of patients suffering from myocardial infarction or ischaemia reperfusion injury and inhibitors of Akt3 activity decrease tumour cell survival and result in tumour regression. Akt3 protects cells from apoptosis. Gene therapy using Akt3 reduces the confarction function, improved quality of life and reduced mortality. In parine with existing heart failure, gene therapy with Akt3 reduces to process of ventricular dilation and slows down disease progression. Akt3 cell death by apoptosis, including Alzheimer's disease progression or osteoarthritis Note: The present sequence is given in the sequence of alseting but is not featured anywhere else in the specification or sequence.
